

EQUISOL

ADVANCED TIMBER STABILISING OIL

PRE-OILED TIMBER NOW AVAILABLE

We now offer a pre-oiling service for a range of timber.

Machine coated with Equisol on all four sides for a better finish. With less work on site!

Pre-protect your next project before the timber is delivered to site. Equisol penetrates into the timber, allowing moisture and heat to escape, whilst retaining the natural feel of wood. Formulated for the extreme Australian environments.

Available for a range of timbers. Can be applied to decking, cladding, lining and many other products.

6 architect colours or clear.

Timber is pre-oiled with one coat of clear Equisol, ready for a second top coat with choice of colour after installation.

INSTALLATION BENEFITS	PRE COATED	AFTER INSTALLATION
Timber components can be assembled before installation onsite	✓	✗
Protects timber during construction and minimises staining	✓	✗
Timber in difficult access situations can be pre-coated to reduce costs in labour and scaffolding	✓	✗
Less trades on site	✓	✗
Reduces onsite labour costs by reducing the amount of work onsite	✓	✗
Reduces onsite issues and mess	✓	✗
Accelerates installation time as deck does not need to dry between work	✓	✗
Reduces number of top coats on site	✓	✗
More consistent coating than possible by hand	✓	✗
Saves time	✓	✗
Not reliant on the weather for onsite application	✓	✗
No sanding in between coats	✓	✗
Reduced hazard of slippery surfaces by reduced drying times	✓	✗
TIMBER PROTECTION		
Minimise blisters, cracks, peels and flakes	✓	✗
All four sides of timber are protected, minimising surface checking, cupping, warping and splitting	✓	✗
Improves dimensional stability by minimising absorption of moisture	✓	✗
Surfaces that cannot be reached by brush after installation are protected	✓	✗
Extends the service life of decking and retains the value of the asset	✓	✗
